about

BRITEX Stainless Steel Inset Flushing Sinks are supplied with a flange around the top of the bowl allowing them to be inset into almost any solid surface. Fabricated from 1.2mm commercial grade 304 or acid resisting grade 316 satin finish stainless steel, the conical shaped bowl includes a concealed perforated tube around the top of the bowl that can be 'flushed' when connected to a flush valve – such as an In-wall cistern and provides efficient, hygienic removal of liquid waste from all internal bowl surfaces. BRITEX Stainless Steel Inset Flushing Sinks are available with either a 50mm or 100mm dropper waste and are common place in health projects and aged care facilities or in wineries, where they are used as a wine spittoon. An OEM version of this product - without top flange - can be supplied for welding into bench tops by others.
